# TouchOne

## Manage Users

Need to add a new PIN for the cleaner, or delete an ex flatmates user? TouchOne makes it simple to add, remove and edit users on your alarm system. You can also add photo's to each user to help differentiate them.

## Manipulate Zones

The full QWERTY keyboard on the TouchOne makes it easy to name or rename Zones on the fly. You can also Isolate a Zone at any time with just one touch.

## Control your Home

The TouchOne gives you a centralised interface to control your home. Want to open the Garage Door, turn off the pool heater and the master light switch before you leave? The TouchOne allows you to control Alarm Outputs with the flick of a switch.

## Your Photo's in gorgeous HD

What better way to view your photo's then on the TouchOne's gorgeous HD display. Over 1 million pixels squeezed onto the 7" display, The TouchOne offers a resolution like no other alarm interface.

## Help when its needed

Sometimes things go wrong, so the TouchOne constantly monitors the health of your alarm system. Should anything go wrong, the TouchOne will display your Alarm Technicians contact details to get the issue resolved.

## Engineered for the future

The TouchOne can be updated by simply inserting an SD Card. With built-in WiFi and Bluetooth Low Energy, the TouchOne is ready to be the next generation touch interface for your home.
